

BATTERY WATERING TECHNOLOGIES

DIRECT FILL LINK™

# DIRECT FILL LINK

## CONTROL AT YOUR FINGERTIPS

### SUPERIOR WATER DELIVERY

The Direct Fill Link is smaller, more robust, and less cumbersome to handle than traditional watering guns. The ergonomic streamlined design makes it comfortable to use.

### SAFER

The Direct Fill Link operates like a watering gun. Without a lock on the handle, it is safer to operate. There is no chance that the battery will continue to be filled if the user walks away while filling.

### PART # DF72

Direct Fill Link with  
09FBLUT3 connector

### EASY TO USE

Just connect the Direct Fill Link to a standard garden hose. When filling, watch for the flow indicator to stop spinning, then disconnect it from the system. We also offer a variety of hose and hose/strainer combos.

### MAXIMUM PERFORMANCE

The flow rate is fast enough for the largest batteries, yet gentle enough to fill accurately each and every time. The Direct Fill Link reduces pressure down to 10 PSI and will handle incoming pressure up to 90 PSI.

### INNOVATIVE FLOW INDICATOR

The flow indicator is encased in PVC pipe making it more robust and extremely durable.
